Title: **Electrochemical sensor for *Brucella abortus* using doped nano metal oxide.**

Abstract: A novel electrochemical sensor for *Brucella abortus* using nanosized Cu and Ba doped magnesium oxide has been disclosed. The synthetic procedure is described for producing Cu and Ba-doped nano material which is also novel and significantly different from seemingly known products in terms of properties. The synthesized nanomaterial has been used as a matrix in the fabrication of *Brucella abortus* electrochemical sensor by screen printing method as the working electrode on gold-plate electrode over glass epoxy substrate. This *Brucella abortus* electrochemical sensor as fabricated in this invention exhibited ultra-high sensitivity of 0.181 $\mu\text{A/mL}$ of CFU and linearity over 240×10^2 CFU/mL for Cu doped MgO, while 0.33 $\mu\text{A/mL}$ of CFU and with slight non-linearity for Ba doped MgO. CuMgO₂ is found more sensitive than BaMgO₂. Such a high sensitivity for *Brucella abortus* sensor using doped metal oxide has not been hitherto reported elsewhere which makes this sensor also as 'novel' and 'unique'.
